# PLC EXPANSION MODULE
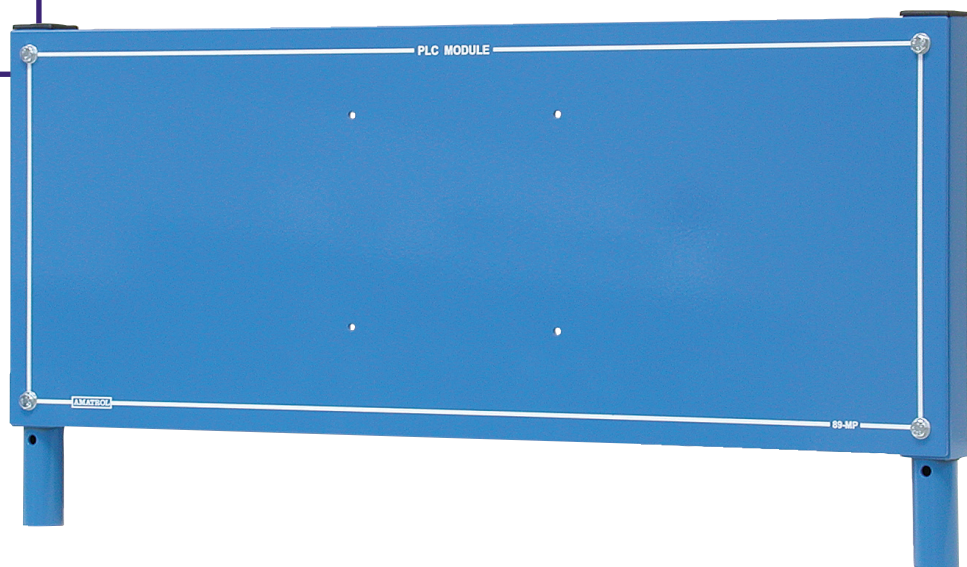

## 89-MP

89-MP used to expand the 890-PEC-B

## CURRICULUM IS THE KEY TO LEARNING

### Learning Topics:

- **Data Highway Network**
- **Remote I/O**
- **Multiple Vendor Platform**
- **Quick Changeover**

The 89-MP PLC Expansion Module adds to the 890-PEC-B Troubleshooting Learning System to create a dual PLC learning system. The 89-MP is an ideal method of teaching applications such as remote I/O and Data Highway Networks, where multiple PLCs are required. With just one learning station, students can set up a multiple PLC network between the PLCs mounted on the 89-MP and the 890-PEC-B.

The 89-MP is also a cost effective way to support multi-brand or model training. Two different PLCs can be mounted on the learning station at all times so changeover between the two PLCs only requires the student to connect a new quick-connect cable set.

## TECHNICAL DATA

**Compatible with:**
- A-B SLC500 PLC
- A-B Control Logix PLC
- Siemens S7 PLC

**Additional Requirements**
- 890-PEC-B PLC Troubleshooting Learning System
- Fault Kit compatible with PLC selected
- PLC and software — contact Amatrol for specific details of PLC and software requirements
