

VRNA's immersive virtual reality experiences are a more effective and cost-efficient way to teach Emergency Medical Response skills.

What It Is

VR experience training designed for Emergency Medical Responders. Includes **10 scenarios** covering testable skills for state and national certification.

What It Does

VRNA gives students a way to learn and **practice emergency care** in a low-risk environment, whether it be in class, at home, or supplementary to lab and field training.

Why It Works

Our design offers a cost-effective way for a greater number of students to access a variety of hands-on skill scenarios at lower costs than traditional, limited-use mannequins.

Cardiac Arrest | Home Birth | Drug Overdose Response | Spinal Immobilization | Vehicle Extrication | Joint Immobilization | Bleeding Control | Shock Response | and more!
